

# The FTB-1

**HALCYON**  
OPTICAL SERVICES

## - Singlemode Fibre Test Box -

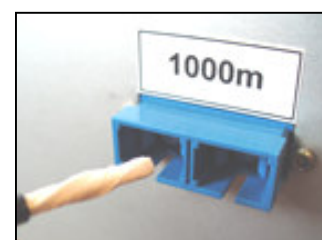

The FTB-1 consists of a series of different lengths of singlemode fibre and a variable attenuator. It may be used for verifying LAN test equipment, testing OTDRs, etc.

Fibre lengths: 50m, 250m, 500m, 1000m, 2500m, 5000m, 7500m

Attenuator: ND filters 5dB, 10dB, 20dB plus a 0.4dB filter for use in tandem.

To clean the internal connectors use special narrow cotton buds and iso-propyl alcohol (IPA).

Alternatively, unscrew the front panel of the FTB-1 and gently lower it down, ensuring that it is supported at all times to protect the fibre pigtails inside. Unplug the connector and clean the end with IPA and a soft tissue.
