Brief Synopsis

- Freelance optical fibre technology consultant.
- Design of optical measurement systems.
- Problem solving and customer support.
- Calibration expertise.

Example Consultancy Assignments

Landing gear monitoring: A current project is to measure the loading on aircraft landing gear using fibre Bragg gratings. More Information on this three year Cleansky funded project can be seen here:

http://cordis.europa.eu/programme/rcn/700300_en.html

Gas turbine engines: Optical pyrometry may be used to measure the very high blade temperatures inside gas turbine engines. The operating environment of these engines is thermally and mechanically hostile. As part of a Framework 7 project, a long-wavelength pyrometer was successfully developed to provide real-time measurements of the temperature of thermal barrier coatings (TBCs).

Mode controller: Recent standardisation in Local Area Networks necessitated a means of being able to specify and control the mode distribution in multimode fibre. A novel technology was developed enabling the mode distribution to be adjusted to comply with the standard. This device is now being manufactured by Arden Photonics Ltd. In the course of this work, it was necessary to design and build test equipment to characterise mode distribution in fibres, this has also become a product.

High-resolution interferometry: A high power Michelson interferometer was required for the inspection of the end-face of cleaved optical fibres. Ray-trace software was used to design an optical system that compensated for aberrations caused by viewing through a beamsplitter cube. This system is now in commercial production.

Mode-field diameter measurement: The challenge here was to provide a high quality image of the side view of a cleaved fibre end, so that it could be accurately positioned for measurement of its mode field. A careful balance between optical resolution and the depth of focus was required so that both the end of the fibre and its sides were simultaneously in focus

Technology surveys: Working for a patent attorney, a series of technology and reviews were carried on novel waveguide components for the Photonics industry. This work entailed comprehensive searches of technical journals and patent databases.

Optical time domain reflectometer: Working for a major designer of test equipment, the role was to assist in the design of the optics for a multimode OTDR and provide algorithms for data processing. Compliance with international fibre standards was a key part of the project.

Camera viewfinder optics: Working for a manufacturer of 'intrinsically safe' test equipment, the requirement was to design an optical viewfinder for a digital camera.

Chronological Career Summary

1999-present: Freelance Consultant: Halcyon Optical Services.

1986-1999: Measurement Standards Manager: GN Nettest, (formerly York Technology Ltd.).

Responsible for the calibration and traceability of fibre characterisation products. This work included running a calibration laboratory to ISO 9000 standards and the development of new calibration techniques, working closely with NPL in the UK and NIST in the US. I was also a special advisor to the Department of Trade & Industry to assist NPL in setting up a facility to measure the non-linear properties of optical fibres.

1983-1986: Project leader: York Technology.

Development of an automated optical fibre cleaving and inspection instrument, and the design and development of a multimode bandwidth measurement system.

1977-1983: Senior Scientist: Plessey Research (Caswell) Ltd.

Development of piezo-electric fibre cleaver technology. Research into temperature and strain sensing using optical fibre interferometers. Awarded A. F. Bulgin prize for integrated optics work.

1974-1977:

Nottingham University: BSc Honours (upper second) in Physics.

Technical Skills

- Optical test equipment design.
- Visual Basic and VB.NET programming.
- WinLens optical design software.
- Calibration and uncertainty estimation.
- MathCad mathematical analysis and modelling.
- Optical fibre standardisation.

Publications

'Photochromic Stripe Waveguides for integrated optics', 1st European Conference on Integrated Optics, London, Sept 1981.

'Optical Waveguide Components in Organic Photochromic Materials', IREE vol 53, no.9, Sept 1983.

'Development of a Calibration Standard for Fiber Geometry Measurements', Symposium on Optical Fibre Measurements, Boulder, CO. USA, Sept 1988.

'Towards a Calibration Standard for Fiber Geometry Measurement', Conference on Optical Fiber Communication, OFC 90, San Francisco, USA, Jan 1990.

'Calibration of Fiber Diameter Measurements', Symposium on Optical Fiber Measurements, Boulder, Co. USA, Sept 1990.

'Fiber Diameter Measurements and their Calibration', Journal of Lightwave Technology, vol 8, no. 9, Sept 1990.

'Measurements on the Uniformity of Fibre Cladding Diameter', Optical Fibre Measurement Conference, York, UK, Sept 1991.

'COST 217 intercomparison and analysis of fibre mode-field diameter measurements', IEE Proc-J, vol 138, No.6, Dec. 1991.

'A Re-Formulation of the Expression for Mode-Field Diameter in the Variable Aperture Domain', Photonics Technology Letters, vol 6. no. 2, February 1994.

'Measurement and Calibration of Fiber Coating Geometry by Grey-Scale Analysis', Journal of Lightwave Technology, vol 13, no. 8, Aug 1995.

'A comparison of three techniques for effective area measurement of single-mode optical fibres', Symposium on Optical Fibre Measurements, Boulder, CO. USA, Sept 2000.
